Causes of Algorithmic Bias

„**who** codes matters, **how** we code matters, **why** we code matters“

– Joy Buolamwini

Source: <https://www.nist.gov/news-events/news/2022/03/theres-more-ai-bias-biased-data-nist-report-highlights>

Systemic Bias - Gendered Perspectives

Situated knowledge

- I. Knowledge is always partial
- II. Knowledge is always involved in discourses of power
- III. Reflection and responsibility

Donna Haraway

- I. Fixing the Numbers
- II. Fixing the Institution
- III. Fixing the Knowledge

Quelle: <https://genderedinnovations.stanford.edu/>

Statistical/ Computational Bias

Observations or historical Data

Training Data may be biased

- Historical Bias, *e.g. Issues of Representativity*
- Measurement Bias, *e.g. How to infrastructure demands*

Detection of Regularities

Induction - inferring the future from the past

- Learning from unfair patterns in the past leads to repeating those unfair decisions in the future.

Prediction of Future Events

Predictions may dis-/ favor certain groups

Difficulty to quantify fairness: lack of consensus how to compute fairness, contradicting fairness metrics

→ Need for interdisciplinary approaches

→ Education in the field of ethics and gender/ and diversity, and intersectionality

Status Quo

Human Biases

Gender Marketing: Stereotypes may not match the Need of the Customers

Source: http://www.jeongmeeyoon.com/aw_pinkblue.htm

“For example, video game designers designed a game platform for girls in pink because that is what the parents (who purchase the game) perceived their girls wanted. The girls themselves preferred darker metallic colors (Rommes, 2006).”

Cluster of Excellence - Internet of Production

Providing **semantically adequate** and **context aware** data from production, development and usage in industry...

... not only one-time, but rather continuously and highly iterative in **real time** with the **adequate level of granularity**...

Providing **semantically adequate** and **context aware** data from production, development and usage in industry...

... not only one-time, but rather continuously and highly iterative in **real time** with the **adequate level of granularity**...

Internet of Production
Cluster of Excellence EXC 2023

... for a new level of **cross-domain collaboration**.

Future Research: Living Lab on Gender-Responsive and Fair Algorithms

Development of interdisciplinary approaches for a discrimination-sensitive and gender-responsive use of algorithms through...

... monitoring the impact of detailed explanations on the perception of fairness in AI,

... evaluating methods of explanation regarding their suitability to make discrimination detectable for laypersons,

... developing innovative strategies to integrate gender and other diversity dimensions into explainability tools.

Outlook: AI for social good (AI4SG)

“**AI4SG** facilitates the attainment of **socially good outcomes** that were **previously unfeasible, unaffordable or simply less achievable** in terms of efficiency and effectiveness.”

– COWLS et al. (2021)

SDG 13 Climate Action

Technological improvement through AI

Enables ...

- **Smart Cities** – e.g. by autonomous electrical vehicles
- **Circular economies** and efficient use of **resources**
- Demand response in the **renewable energy sector**

Vinuesa et al. (2020)

Outlook: AI for social good (AI4SG)

“**AI4SG** facilitates the attainment of **socially good outcomes** that were **previously unfeasible, unaffordable** or **simply less achievable** in terms of efficiency and effectiveness.”

– Cows et al. (2021)

SDG 1 Reduce poverty

Predict poverty by satellite imagery and machine learning

- Accurate and scalable method with low costs
- Track and target poverty
- Possible indicator for SDG 1 (new measurement)
- **Identify problems**
- **Create Actionable knowledge**

Jean et al. (2016)

Thank you for your attention!

I am looking forward to the discussion!
