## Running Training Schedule

## Introduction

We noticed that a lot of students are picking up running now as it is a sport that can be done individually and helps you to keep you mind fresh. However, running can cause injuries when you do not adhere to some well-structured training scheme, especially when you are a beginner. Therefore our running teacher Jos Tóth put together a training schedule for both beginners and more experienced runners.

Get ready for a nice running scheme, but please take note of the following advice:

- Listen to your body and don't hurt yourself! Reduce intensity if you feel it is too stressful for your body!
- Make sure you do a proper warm-up before running. Use this video for inspiration!
- Avoid busy places and keep the prescribed distance of at least 1.5 meters from other people!

Enjoy!

## General information

\# The scheme always covers a period of four weeks.

## Structure training schedule.

\# A schedule is present for three levels regarding experience with running.
\# There are three training days offered. It is important that you at least still doing two workouts.
\# MD = Monday / TH = Thursday / SD = Saterday
\# For each four-week period a general training goal is listed (see bottom line schedule)
\# For each core training information is available.

* Type of Training (eg fartlek)
* Time indication
* Speed (pace)
* recovery information
* Training aim

## Duration and other indications

| \# | IP | Interval-Pause. |
| :---: | :---: | :---: |
| \# | SP | Set-Pause. |
| \# | Pace | Speed for a given distance |
| \# | TIP | Talking is possible |
| \# | MHB | Medium Heavy Breathing. The respiratory rate is higher but still good to persevere. Talking is difficult. |
| \# | TNP | Talking is not possible (high respiratory rate) |
| \# | 5' | A duration of 5 minutes, for example, a part of an interval or minute walk. |
| \# | 25" | A duration of 25 seconds, for example, a part of an interval |
| \# | $8 \times 300$ | An array of $8 \times 300$ meters in which there is, after every 300 meters a small recovery break |
| \# | $\begin{aligned} & \text { 1', 2', 3', 4', } \\ & 3^{\prime}, 2^{\prime}, 1^{\prime} \end{aligned}$ | Indication of (e.g.) a pyramid where the time (in minutes) increases and decreases again (interrup. by interval-breaks) |
| \# | 30"/100 m | 100 meters in 30 seconds. |
| \# | $2 \mathrm{x}(5 \times 300 \mathrm{~m})$ | Two sets of each $5 \times 300$ meters. There is a pause (IP) after every 300 m . After the first set, there is a set pause (SP). |
| \# | IP and SP | Do not walk but quietly dribbling. |
| \# | W | Walking |
| \# | IA | Inapplicable |
| ecifieke informatie |  |  |
| \# | Endurance | This is a form of training in which one and the same (relatively low) speed is used for a certain period of time |
| \# | Split endurance | A form of exercise where the same pace for a certain period of time (longer compared with interval) is used. There are breaks. |
| \# | Interval | In interval training, a certain distance is repeated 3 to 10 times. Each distance is done in the same speed This can be done in one or two sets (sets). Interim recovery through an interval or set break. |
| \# | Fartlek | This is a training where power, distance and speed are applied |
| \# | Pyramid | During this training gradually the length of time to run is increasing and decreasing |
| \# | Brisk walking | With brisk walking you have a higher rate than regular walking. Determine this page (training stimulus for yourself (km/ |

## Training Course 1

1000 m .
Every 100 meter a mark ( 0 to 10 ) is present

This course can be used for several kinds of (shorter) interval programs
Be aware of traffic

## Training Course 2

## 3500 m .

Every 100 meter a mark ( 0 to 35 ) is present

This course can be used for several kinds of interval programs

## Be aware of trafic

## Training Course 3

1600 m .
Every 100 meter a mark ( 0 to 16 ) is present

This course can be used for several kinds of interval programs
Be aware of traffic (bicycles)
