

EDUCATION IS NOT PREPARATION FOR LIFE; EDUCATION IS LIFE ITSELF

TU Delft is not an insurance company

Teaching and learning at TU Delft is centered around growth and development of students, lecturers, and support staff – with the goal of contributing to a better future. TU Delft education is driven by research and this development is seen as a collaborative and transformative process that is motivated by the interest and passion for the different disciplines that are offered.

University students are both learners and teachers in the classroom

*Autonomy, Awareness, Curiosity, Critical thinking,
Can-do mentality*

Students are taught to take charge of their own learning and develop the desire and motivation to expand their knowledge. Students and lecturers learn to be curious about the world, and their professional role and position in it.

Sleepless nights are no longer the norm to be an engineering student

*Growth mindset, Adaptable,
Wellbeing, Failing forward*

Excellence is not the goal but rather a product of growth; students and lecturers are now better equipped with dealing with challenges as they prioritise their well-being and are able to see and appreciate progress.

Haiku of the Day

After the storm is gone
★ What remains are we ★
And lessons learned

Are we as engineers asking the right questions ?

Students and lecturers are facilitated to have an inclusive approach and keep an open mind towards the varied perspectives, experiences and lives of others.

*Ethical, Inclusive, Respectful,
Socially aware*

Tell us headlines that you envision about teaching and learning at TU Delft in the year 2030
