Connecting wireless to the ‘eduroam’ network on Windows 10

Before you begin

The following instruction is supported by the TU Delft and has been tested to be working. However, we offer this manual to you as an extra service. In case you have a configuration or version of Windows 10 other than the one described here and you have problems connecting to eduroam, neither ICT nor a Servicepoint will be able to help you to connect to eduroam.

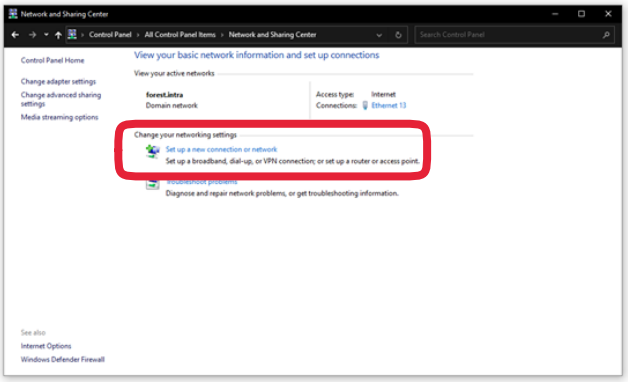
Prerequisites

In order to make a successful connection, make sure that all your wireless hardware is installed, switched on and managed by Windows and that you have the latest updates for Windows installed.

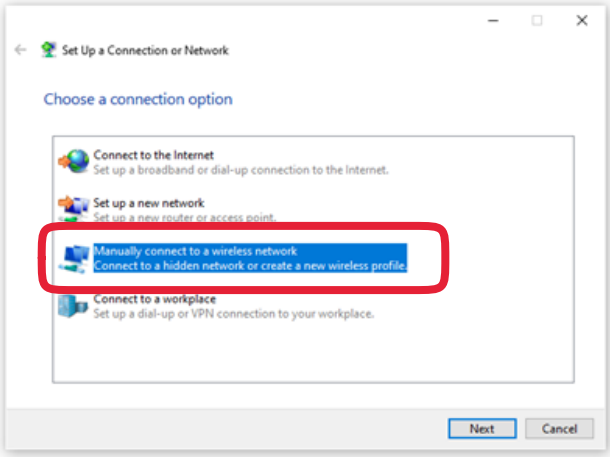
To create a wireless profile for eduroam do the following

Step 1. Go to Control Panel -> All Control Panel Items -> Network and sharing center.

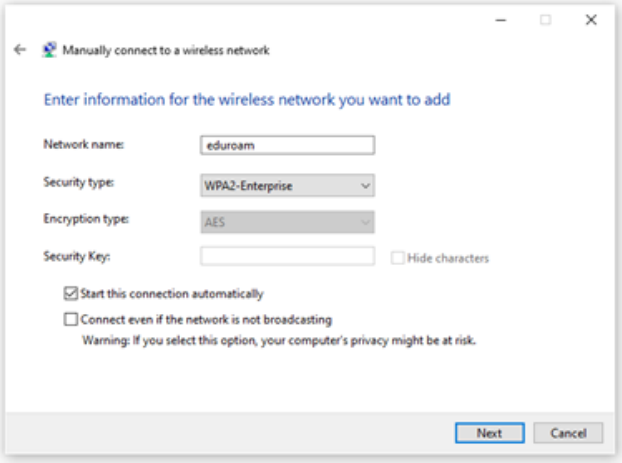
Step 2. Choose “Set up a new connection or network”:



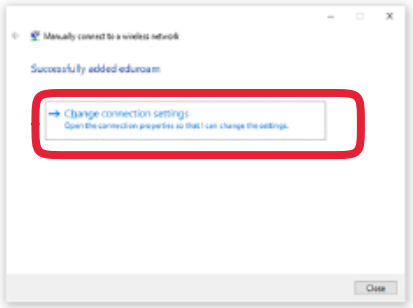
Step 3. Click Manually connect to a wireless network:



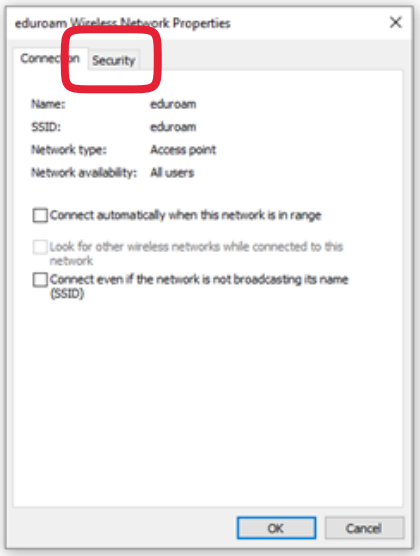
Step 4. Fill in the following



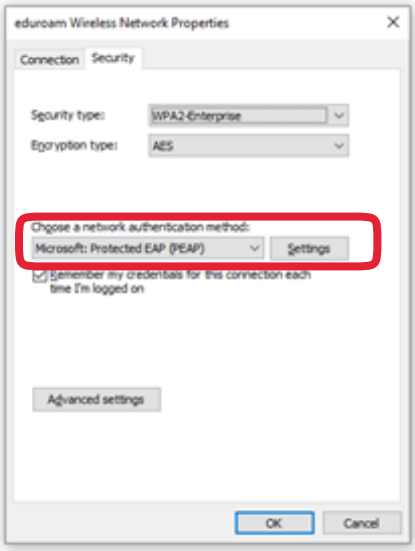
Step 5. Click change connection settings:



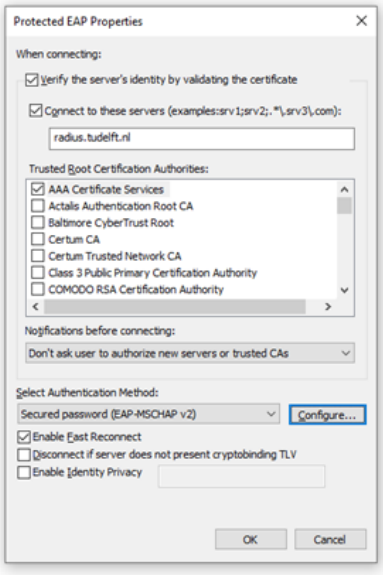
Step 6. Click Security:



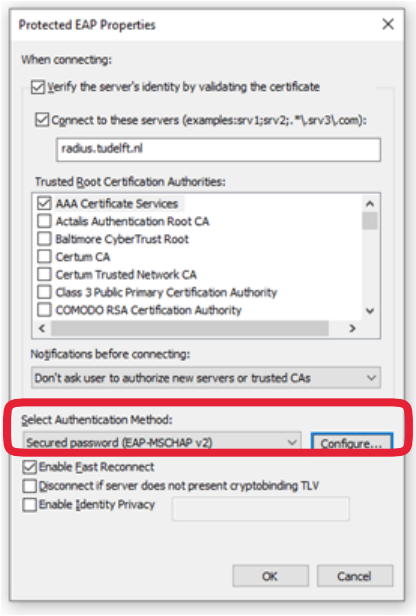
Step 7. Choose at “choose a network authentication method” “Microsoft: protected EAP (PEAP)” en click settings:



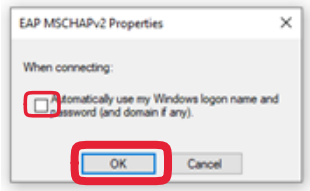
Step 8. Fill in the following:



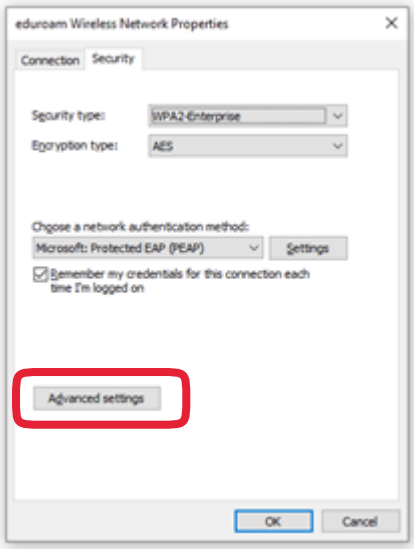
Step 9. Choose at “Select Authentication Method” “Secured password (EAP-MSCHAP v2) and click configure:



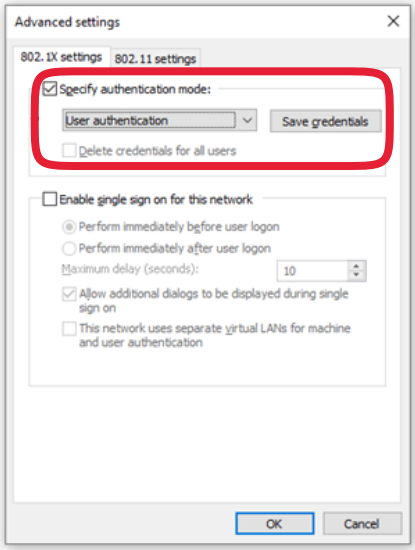
Step 10. Uncheck “automatically use my Windows logon name and password", click OK, click OK:



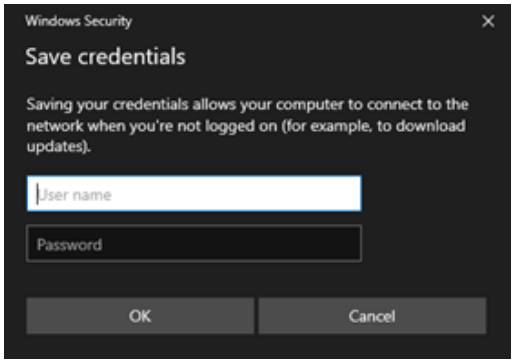
Step 11. Click “Advanced settings”:



Step 12. Choose at “Specify authentication mode” “User authentication” and click “Save credentials”:



Step 13. Fill in netid@tudelft.nl at the “User name” field and your password in the password field:



Click OK. Click OK.
