Installing Microsoft Teams

for Linux

Teams in Linux

1. Download Microsoft Teams via the following link: https://aka.ms/get-teams-linux.
2. Choose Download for desktop and then Download Teams
3. Start the app by searching for 'teams' in the Linux menu.
4. You will now see the screen below. Fill in your TU Delft account and log in.
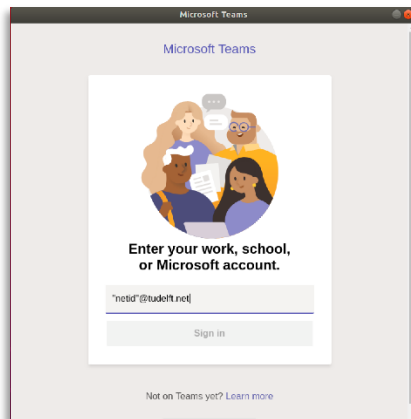

5. You will now be redirected to the Microsoft environment. If necessary, enter your TU Delft account again and then choose the next one.
6. You will now get to the screen below. Enter your password and log in.
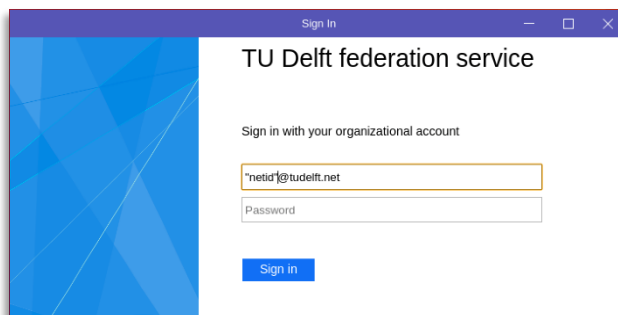

7. After you have logged in, you will be asked to stay logged in. Choose yes here.

8. You are ready to get started with Teams!
