

IDEM404

Research (3-5 EC)

Students participate, on an individual basis, in one of the ongoing research projects in the Faculty IDE. The student gets acquainted with setting up and executing a research project. Important activities are reading relevant literature, formulating research questions, data collection, data analysis and writing report or scientific article.

After a research project, students are able to participate in ongoing research in the faculty and are able to execute a research project.

The research project is executed and supervised in a small group or on an individual basis. The project will be formulated within ongoing research in the Faculty IDE. A researcher working on this specific research will supervise the student/ small group.

Assessment: Report or Paper
