

Graduation Opportunity at Kalkhoff-Bikes (Germany)

Urban areas in Europe are increasingly becoming car-free zones to create space for mobility solutions that require less public space but still meet mobility needs. People want to keep moving around cities, and the growing interest in sustainable mobility solutions presents new opportunities for providers like Kalkhoff-Bikes.

Kalkhoff-Bikes recognizes this evolving mobility need in urban areas. Therefore, the company invites an Industrial Design Engineering (IDE) student to map and present the most likely future scenarios for bike mobility through a boundary object, such as a strategic roadmap, a minimum viable product (MVP), or even a working prototype. You will be part of Kalkhoff's design team. The company is based in Cloppenburg, Germany, and can provide cost-free accommodation if necessary.

The project starts in September.
