

Research elective opportunity

What about implementing your solutions?

Design is often viewed as a discipline where you create new solutions to problems. But without implementing these solutions, there will be no impact. We therefore want to see how design knowledge (as design literature) discusses the process of implementing ideas to make them achieve impact.

In this research project, you will conduct and write a scoping review together with Fredrik Bodell, who researches the implementation of digital health solutions into clinical care. The research process will be to examine existing research on design to see how implementation is viewed. The intention is to publish the research at a design conference.

An interest in reading and writing is necessary!

The research project can be either 3 EC or 5 EC.

If you want to know more, please contact f.k.bodell@tudelft.nl
