

## Model based development of hydroxynitrile lyase catalysed processes

**PhD-student:** W.F. Willeman

**Promotor:** Prof.Dr. J.J. Heijnen

**Supervisor:** Dr. Adrie J.J. Straathof

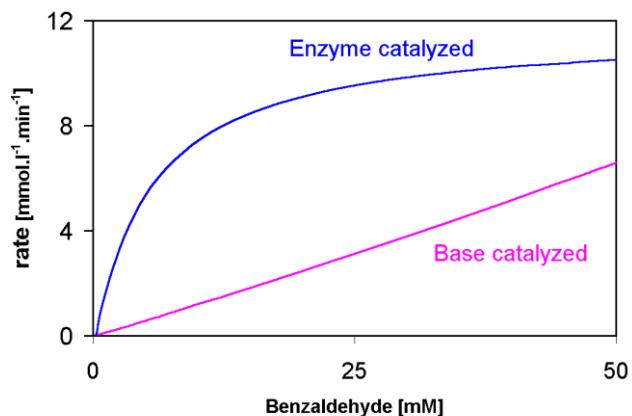

**Institute:** Delft University of Technology, Department of Biotechnology

**Project term:** 1997 – 2001

**Financed by:** IOP Catalysis

### Description

Hydroxynitrile lyases (Hnl's) are highly enantiospecific enzymes used for the synthesis of enantiopure compounds. Industrial production of (*S*)-*m*-phenoxybenzaldehyde cyanohydrin on multi-ton scale has commenced. This work describes the development of a general strategy towards the development and optimization of the industrial synthesis of enantiopure cyanohydrins, catalyzed by hydroxynitrile lyases, in aqueous-organic biphasic systems.
