

Magnetocrystalline anisotropy and the magnetocaloric effect in Fe_2P

*L. Caron, M. Hudl, V. Höglin, N. H. Dung, C. P. Gomez,
M. Sahlberg, Y. Andersson, P. Nordblad and E. Brück*

Outline

- Why go back to Fe₂P?

- Fe₂P

structure

what is in literature

polycrystal

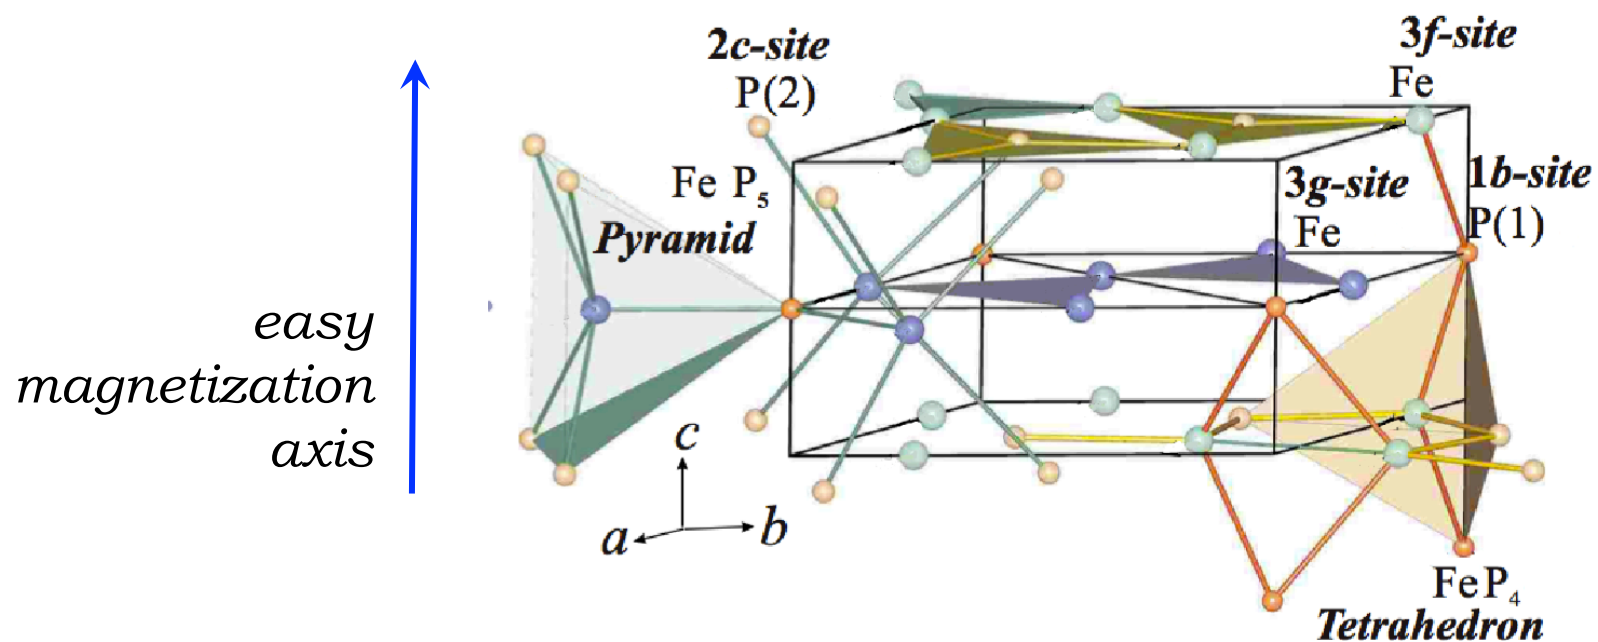

single-crystal

anisotropy & MCE intermezzo

anisotropy & the nature of Fe₂P's magnetic moments

- Conclusions

Fe₂P

D. Fruchart et al. / Physica A 358 (2005) 123–135

Per Nordblad, PhD thesis Uppsala University 1982

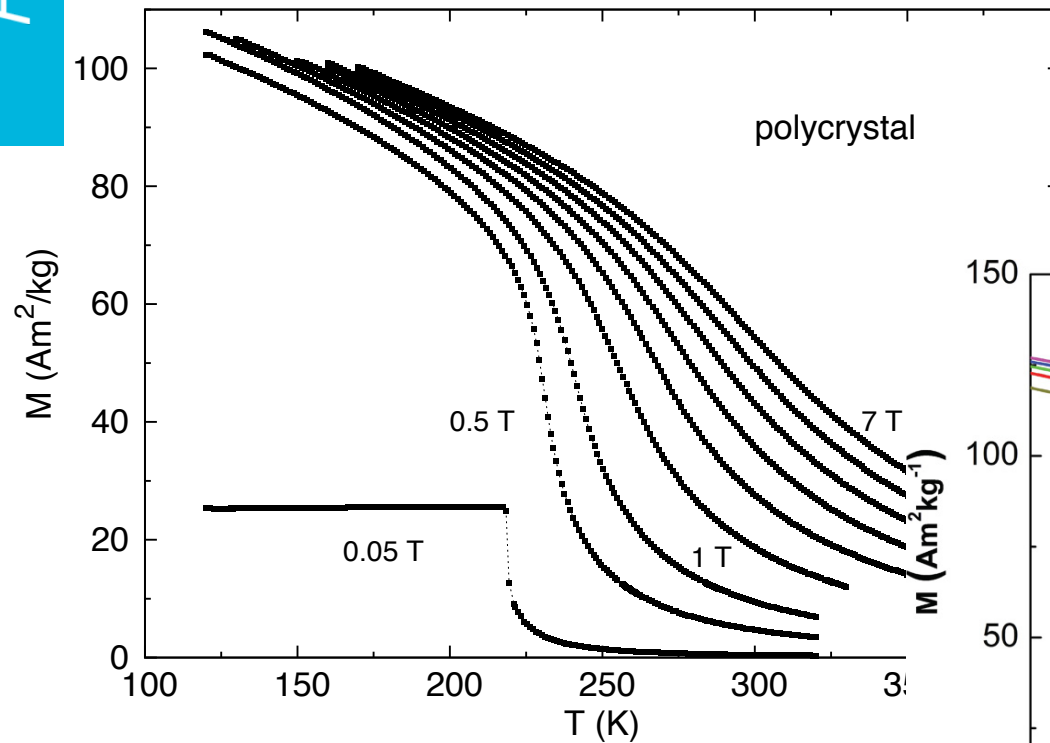

Fujii et al. JPSJ 43, 41 (1977)

Polycrystalline Fe₂P

Polycrystalline Fe₂P

Dung et al. *PRB* **86**, 045134 (2012)

Single-crystalline Fe₂P *c*-direction

Entropy changes

Single-crystalline Fe₂P *a*-direction

Field dependence of T_C

Sandeman *Scripta Materialia* **67**, 566 (2012)

However...

- Crystals are not flawless
impurities, asymmetries...
 - External magnetic fields are not 100% homogeneous over the sample volume
- and*
- Alignment is rarely perfect

The magnetization in all directions needs to be measured.

Track the rotation of the magnetization...

PHYSIQUE. — *Sur un nouveau phénomène magnétocalorique.* Note de
MM. **PIERRE WEISS** et **AUGUSTE PICCARD**, présentée par M. Paul Pain-
levé.

.
.

II. Ce phénomène est, comme la discontinuité de la chaleur spécifique
au point de Curie, une conséquence du champ moléculaire. La chaleur élé-
mentaire communiquée à l'unité est

$$dQ = C_{\sigma} dt - (H + H_m) d\sigma,$$

où σ est l'aimantation spécifique,
 C_{σ} la chaleur spécifique à aimantation constante,
 H le champ extérieur,
 H_m le champ moléculaire.

Comptes rendus hebdomadaires des séances de l'Académie des sciences 1918

The magnetization in all directions needs to be measured.

$$M_{total}^2 = M_{\perp}^2 + M_{\parallel}^2$$

Entropy Change

Magnetization anisotropy

Magnetic Anisotropy

Conclusions

- Full MCE characterization of high purity stoichiometric samples
- Low $\Delta S_M \sim 4 \text{ J/kgK}$ (0 – 5 T)
- Huge $dT_C/d\mu_0H$
- Magnetization anisotropy
localized character of the moment
- Anisotropy plays a crucial role in the MCE for single crystals
both components of the magnetization must be checked!
