CAN YOU SOLVE THIS ?

We have 4 connected gears in a machine. The first and largest has 168 teeth. The others, decreasing in size, have 49, then 32, then 15 teeth.

How many complete turns must the largest of these cogs make before all four return simultaneously to the starting position?

Do you think you got it?

DID YOU KNOW?

Early Babylonian, Egyptian and Hebrew records indicate that length was first measured with the forearm, hand, or finger.

Did you know that around the world different cultures have different numerical systems depending on what parts of the body they use to count?

THAT TIME WHEN...

In early 1941, the inventor of computational statics, John Argyris was arrested for leaking research findings to the Allies. The head of the intelligence service of the German forces arranged Argyris' escape under the pretence that Argyris was to be executed outside the concentration camp, the guards let them pass by. Shortly afterwards, Argyris managed to swim across the Rhine to freedom, holding his passport between his teeth. Without that swim, mechanics as we know it would be very different!

John Argyris (1913 - 2004), one of the inventors of the Finite Element method

HOW TO SOLVE A PHYSICS PROBLEM

1) WRITE OUT ALL EQUATION AND FACTS		2) DRAW FREE BODY DIAGRAM		3) SOLVE.	
4) GET WRONG ANSWER		5) CHECK CALCULATIONS. GET NEW WRONG ANSWER		6) REDO CALCULATIONS. GET THIRD WRONG ANSWER	
7) SPECIAL PLEADING	MAYBE IF I AVERAGE MY ANSWERS AND TAKE THE SQUARE ROOT.	8) CHECK FOR ERRATA	STUPID AUTHORS PROBABLY GOT THE STUPID WRONG ANSWER.		
9) FIND NOTHING.	EITHER EVERYONE EVERYWHERE IS WRONG, OR I AM SO... OH GOD.	10) LOCATE ALGEBRA ERROR	$2-3=5$		
11) GET FOURTH WRONG ANSWER		12) LOCATE SEVENTEEN MORE ALGEBRA ERRORS	$2-3=5$ $5^2=52$ $52=5(2)=10$ $10=ZEBRA$		
13) GET RIGHT ANSWER		14) FEEL INTELLIGENT	TODAY I SPENT FOUR HOURS ON A SINGLE MATH PROBLEM.		
15) REALIZE PROBLEM HAS SIX MORE PARTS	(i) Do again with $f_i = f_i/2$. (ii) Do again for a universe where $k = C_0$.	16) BECOME POET	SO... HAPPY.

Although Isaac Newton had unexceptional results in high school, one of his teachers thought he was university material and gave him extra tutoring.

The hallmark of Newton's scientific career: he often did not publish his important discoveries, at least not in a timely manner, and then he became very angry and aggressive when others made similar discoveries independently.

Krantz, S. - G. (2010). Episodic History of Mathematics

DID YOU KNOW?

Using data of only three simple experimental setups (one of which is a pendulum), a computer has been able to figure out Newton's second law as well as conservation of energy and momentum by itself, without any prior knowledge.

Last summer, this line of research was successfully continued with a wider range of physical systems.
