

Dare to experiment!

Join The Green Village

Field lab for sustainable innovation

Are you already familiar with The Green Village and all the opportunities this mini-village offers? Perhaps you have cycled past it before? The Green Village is a **'living lab'** on the TU Delft Campus, focused on the **built environment** where testing can be done at the neighbourhood, street and building level.

It operates under lenient rules, allowing exceptions to standard building codes, which opens up a wider testing space. Here, students, educational institutes, businesses, governments and citizens can **research, experiment, demonstrate** and **validate** their **innovations for a sustainable future**. People live, work and learn at The Green Village. Maybe you will soon too?

Sustainable building & renovation

Future energy system

Climate adaptive cities

THE GREEN VILLAGE

> 15.000 visitors a year

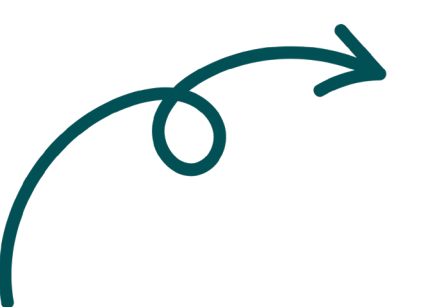

Projects in every province and international

> 100.000 m³ water infiltrated or buffered

> 60 finished student projects

> 300 projects scaled up outside The Green Village

13 residents

Ready for action?

Are you seeking a thesis project, eager to support a pioneering entrepreneur with research, or interested in testing your own innovative idea at The Green Village? Join our community!
